

RESURGENCE

A Strategic Roadmap for Ola Electric's Market Comeback

Aisha Sarfaraz

Ayush Lal

Ansh Gupta

Prakhar Srivastava

OLA ELECTRIC

FROM MARKET LEADER TO **TRUST DEFICIT**

Execution – not vision – drive the collapse

Ola Electric peaked at **35% E2W** market share in early 2024 but rapid decline followed due to service gaps, product issues, and trust erosion

01 SERVICE FAILURE

- ~ 400 **service** centers vs 500,000+ vehicles
- ~ 3–8 **weeks** average repair time
- ~ 72% **complaints** unresolved >30 days

02 SOFTWARE INSTABILITY

- ~28% users faced OTA failures
- ~ Vehicles bricking mid-ride
- ~ No rollback system for consumers

03 BRAND & RESALE COLLAPSE

- ~ Resale value: 40–45% of MRP
- ~ Category NPS: -12 vs +38 (TVS iQube)
- ~ 67% negative sentiment online

04 BUILD QUALITY ISSUES

- ~ Panel gaps, rust on pre-delivery units
- ~ 1.4L vehicles recalled (Oct 2023)
- ~ 11,000+ pending ARAI-flagged complaints

The promise vs the experience

KEY REALITY CHECK

5L+

67%
Negative online sentiment

~28% users faced OTA failures

THE PROBLEM WAS NEVER AMBITION. | IT WAS **EXECUTION AT SCALE**

THREE PILLARS OF RESURGENCE

OLA ELECTRIC

A sequenced 18-month programme designed to convert detractors into advocates and recapture lost market ground

01

RETAIN & WIN BACK

The Great Exchange & Loyalty Flywheel

Free replacement for 50K+ affected
Loyalty credit for existing owners
Referral-led growth incentives
Radical transparency dashboard

Restore trust & reduce churn

Build community advocates

Drive referral led growth

Month 1-6

02

SIMPLIFY PRODUCT

Plug & Play Minimalist Platform

1 platform, 3 battery SKUs only
Battery-as-a-Service (lease model)
Remove non-essential tech stack
Price down 18–22% vs current

Lower upfront price

Predictable cost for customers

Operational efficiency

Month 4-10

03

REBUILD TRUST

Insurance Partnership & Zero-Worry Ownership

50:50 OEM–Insurer claim model
Free scheduled maintenance (3 yrs)
Home-visit service, no queues
Company-fault: 100% covered

Zero- worry ownership

Faster service experience

Stronger trust & brand equity

Month 6 - 18

A CLEAR 18 – MONTH ROADMAP TO RECLAIM TRUST, SIMPLIFY AT SCALE & LEAD INDIA’S EV REVOLUTION

TRUST FREE

Customer Centric

Sustainable Future

Zero-Worry Ownership: Insurance Architecture & Realistic Cost Build-Up

A safety net that builds trust, reduces risk for customers and creates sustainable value for Ola Electric.

CLAIM RESPONSIBILITY MATRIX

Scenario	Customer	Ola Electric	Insurer
Manufacturing defect / OEM fault	0%	50%	50%
Customer negligence / accidental	50%	25%	25%
Scheduled maintenance (all)	0%	100% ✓	—
Third-party damage (road accident)	0%	0%	100% ✓

RECOMMENDED PARTNER INSURERS

Acko General Insurance ★★★★★
Digital-first, OEM-integrated claims (Ola-native), sub-24hr settlement SLA

Focus:
Speed &
Digital

HDFC ERGO Motor ★★★★☆
Largest motor portfolio, Tier-2/3 reach, existing EV underwriting framework

Focus:
Reach &
Scale

Bajaj Allianz ★★★☆☆
Active EV segment push, partnership flexibility, co-branding appetite

Focus:
Partnerships

175 km/charge

Chassis: ₹89,999
Battery: ₹1,199/mo

⊕ ONE PLATFORM. THREE BATTERY OPTIONS. ZERO COMPLEXITY.

PRICE POINT COMPARISON — CURRENT vs PLUG & PLAY (₹'000)

WHY BATTERY-AS-A-SERVICE (BaaS)?

- ✓ Battery = 28-32% of total vehicle cost. Removing it from upfront price cuts sticker shock.
- 🔄 Degradation exchange: Customer pays only delta of capacity loss — no guesswork, no disputes.
- 🔋 Ola retains battery ownership, enabling second-life energy storage revenue stream.

₹ ~₹9,550
Per unit cost saving through rationalisation

₹ 18-22%
Lower price point across portfolio

⊕ 1 Platform
Single chassis for all SKUs

✓ Higher reliability
Fewer components, lower failure points

BaaS Economics: Lease Model, Degradation Formula & Unit Economics

Lower upfront cost. Predictable monthly lease. Long-term value creation.

**Stronger foundation.
Sustainable growth.
Future ready.**

STRATEGIC VALIDATION

Acid Test Scorecard — Does This Strategy Hold Under Pressure?

Stress-tested against 4 failure scenarios. Each pillar evaluated independently.

OLA ELECTRIC

TEST SCENARIO	RESPONSE & RATIONALE	KEY METRICS & IMPACT			OUTCOME
TEST 1:  If insurer refuses 50:50 model due to adverse EV loss ratios?	 Response: Fallback: Ola self-insures via a captive insurance SPV (Isle of Man domicile). Premium collected from customers, claims settled in-house.  Precedent: Tesla Insurance (US), Tata AIG EV pilot.	 ₹250 Cr Estimated premium pool (FY27)	 ~5% Lower claims cost vs traditional IC	 Stronger Unit economics control	OUTCOME PASS  Strategy remains viable with internal insurance control.
TEST 2:  If price increase of ₹20K drives 30%+ customers to TVS/Bajaj?	 Response: BaaS offsets: Ex-battery chassis at ₹89,999 is actually cheaper than current S1 Air. Monthly lease of ₹799 is affordable.  Impact: Total cost of ownership still 18–22% lower than petrol 2W over 5 years.	 18–22% Lower TCO vs petrol 2W (5 yrs)	 ₹799/mo Affordable monthly lease	 <5% Churn even under bear case	OUTCOME PASS  BaaS + TCO advantage keeps customer stickiness strong.
TEST 3:  If 52,000 unit replacements trigger auditor red flags / liquidity crunch?	 Response: ₹324 Cr net cost = ~1.2x Ola's FY24 cash reserves. Manageable via phased execution over 12 months.  Support: Existing AIF-II investors (SoftBank, Tiger) likely to support as 'reputation repair capex'.	 ₹324 Cr Net replacement cost	 12 Months Phased execution plan	 High Investor support probability	OUTCOME MANAGEABLE  Liquidity impact manageable with phased execution & investor backing.
TEST 4:  If Plug & Play cannibalises premium market, hurting margins?	 Response: BaaS gross margin (~30%) compensates for lower hardware ASP. Service revenue CAGR 40%+ as units in field grow.  Outcome: Portfolio economics healthy at 18-month mark even in bear scenario.	 ~30% BaaS segment gross margin	 40%+ Service revenue CAGR	 Healthy Portfolio economics at 18 months	OUTCOME PASS  Diversified revenue protects margins and long-term value.
